Complete console and improved steering position

All controls and displays conveniently right where your fingers and eyes are.

Tilted steering column for a more ergonomic and natural driving posture to reduce fatigue and strain.

Spacious driver compartment

Extra 3" of leg room for greater comfort when driving and getting in and out of the vehicle.

Longer warranty

3-year warranty (or 3,000 hours) on AC vehicles.

GET MORE WITH A MOTREC VEHICLE

Longer warranty

Our 3-year warranty (or 3,000 hours) on vehicles with AC technology is among the longest on the market. Our 2-year warranty (or 2,000 hours) on DC vehicles is also hard to beat.

New design

Motrec signature recessed lights, front bumper with rubber bumpers. Smarter charging, with relocated plug for easier access and LED charge indicator to quickly see the battery's state of charge.

3" longer driver compartment

Improving driver comfort is the easiest way to boost productivity. More leg room means less operator strain and fatigue. It also makes climbing in and out of the vehicle easier and safer. Take driver comfort even further with our premium seat.

Complete console & steering position

Complete console on steering column to put all controls and displays conveniently right where your fingers and eyes are. Our titled steering wheel will also significantly reduce strain and fatigue by giving operators a more natural driving position.

Accessible storage

Large under-deck storage compartment with hinged panel for easy access. 2" deck edge with 10 anchor points to hold cargo securely in place.

AC / Direct drive motor

Asynchronous, high-efficiency motor with temperature and speed sensors

- Maintenance-free brushless electric motor
- Higher possible speeds & better torque at low speeds
- Better control allowing for full motor performance

AC controller & display

AC controller with sealed connector paired with multifunction display

- Precise speed control
- Indicators for speed, battery state of charge, hour meter, odometer, fault warnings
- Programmable & password-protected parameters
- Monitoring capability

WHY MOTREC VEHICLES ARE **BUILT TO LAST**

Custom engineering

From custom modifications to 100% custom-built designs, we can ensure your vehicle gives you everything you need in terms of safety, ergonomics, performance, and power.

Customer-driven innovation

While some manufacturers look for ways to cut corners and boost profits, our engineering team pursues new innovations and technologies to take safety and performance even further. All Motrec vehicles are designed to offer minimal maintenance and easy servicing.

Built-to-last all-steel unibody construction

Greater strength, balance and stability for improved performance and safety under any conditions. Steel is bent, never welded, for an exceptionally solid and rigid body boasting an automotive-inspired heavy-duty chassis. Reinforced at all high-stress areas and at the rear for added impact protection. Easily accommodates add-on components.

Safe & comfortable all-steel cabs

Protects operators and everyone around them. Our customizable cabs come with a long list of standard and optional features: lockable/Mika/removable doors, canopy top, ladder/pipe rack, wipers, rear-view mirror, sliding windows with safety glass, heater, air conditioning, cab-mounted strobe light, cab sound proofing, rust proofing... the list goes on and on.

Damage-protected components

Standard features like recessed lights, sealed electrical components, laser-engraved backlit buttons and heavy-duty ignition key with water & dust-proof switch, all increase operator safety while better protecting your investment.

Heavy-duty powder paint & protection

Quality welding and sandblasting ensures a long-lasting bond of our heavy-duty powder paint, which is then cooked at a high temperature for outstanding rust protection. Base colors include Federal Yellow or Safety Orange; unlimited colors available on request.

High-performance differential & brakes

Aluminum and galvanized steel differential with ground-tooth gears and drum brakes

- Extremely durable, quiet & efficient
- High-capacity tapered roller bearings & splined drive shafts allow use of transaxles in high-performance vehicles
- Higher braking torque & less brake drag

Powerful automatic electromagnetic parking brake

Increases safety by automatically applying the parking brake whenever the vehicle stops moving or is shut off. Also doubles as an emergency stop. Entirely sealed to protect it from debris, elements, etc.

Time-saving roll-out battery compartment

Makes changing batteries extremely quick and easy. Just roll out the compartment to replace the battery with a fresh one and you're good to go. Save even more time by opting for TPPL batteries for opportunity charging that won't affect the battery's lifespan.
